of the document.**

This European Technical Approval replaces ETA-11/0084 with validity from 14/02/2011 au 05/06/2012

Cet Agrément Technique Européen remplace l'Agrément ETA-11/0084 valide du 14/02/2011 au 05/06/2012

Organisation pour l'Agrément Technique Européen
European Organisation for Technical Approvals

I LEGAL BASES AND GENERAL CONDITIONS

1. This European Technical Approval is issued by the Centre Scientifique et Technique du Bâtiment in accordance with:

- Council Directive 89/106/EEC of 21 December 1988 on the approximation of laws, regulations and administrative provisions of Member States relating to construction products¹, modified by the Council Directive 93/68/EEC of 22 July 1993²;
- Décret n° 92-647 du 8 juillet 1992³ concernant l'aptitude à l'usage des produits de construction;
- Common Procedural Rules for Requesting, Preparing and the Granting of European Technical Approvals set out in the Annex of Commission Decision 94/23/EC⁴;
- Guideline for European Technical Approval of « Metal Anchors for use in Concrete » ETAG 001, edition 1997, Part 1 « Anchors in general » and Part 5 « Bonded anchors».

2. The Centre Scientifique et Technique du Bâtiment is authorised to check whether the provisions of this European Technical Approval are met. Checking may take place in the manufacturing plant (for example concerning the fulfilment of assumptions made in this European Technical Approval with regard to manufacturing). Nevertheless, the responsibility for the conformity of the products with the European Technical Approval and for their fitness for the intended use remains with the holder of the European Technical Approval.

3. This European Technical Approval is not to be transferred to manufacturers or agents of manufacturer other than those indicated on page 1; or manufacturing plants other than those indicated on page 1 of this European Technical Approval.

4. This European Technical Approval may be withdrawn by the Centre Scientifique et Technique du Bâtiment pursuant to Article 5 (1) of the Council Directive 89/106/EEC.

5. Reproduction of this European Technical Approval including transmission by electronic means shall be in full. However, partial reproduction can be made with the written consent of the Centre Scientifique et Technique du Bâtiment. In this case partial reproduction has to be designated as such. Texts and drawings of advertising brochures shall not contradict or misuse the European Technical Approval.

6. The European Technical Approval is issued by the approval body in its official language. This version corresponds to the version circulated within EOTA. Translations into other languages have to be designated as such.

II SPECIFIC CONDITIONS OF THE EUROPEAN TECHNICAL APPROVAL

1 Definition of product and intended use

1.1. Definition of product

The SPIT V-MIX + is a bonded anchor (injection type) with anchor rod made of galvanised steel or stainless steel or stainless steel high corrosion resistance (HCR), which is placed into a drilled hole previously injected with a two components injection mortar using an applicator gun equipped with a special mixing nozzle. The anchor rod is inserted into the resin with a slow and slight twisting motion. The mortar cartridges are available in different sizes (150 ml to 825 ml) and systems (coaxial or side by side). The anchor rod is intended to be used with embedment depth from 8 diameters to 12 diameters

The galvanised steel anchor rods are available with:

- ✓ a helical end (M8 to M16),
- ✓ with a two sides 45° chamfer (M20 to M30)
- ✓ with a flat end

The stainless steel threaded rods are available for all diameters:

- ✓ with a two sides 45° chamfer
- ✓ with a flat end

The threaded rods are either delivered with the mortar cartridges or commercial standard threaded rods purchased separately (A4/70 for M8 to M24 and A4/50 for M30).

For the installed anchor see Figure given in Annex 2.

1.2. Intended use

The anchor is intended to be used for anchorages for which requirements for mechanical resistance and stability and safety in use in the sense of the Essential Requirements 1 and 4 of Council Directive 89/106/EEC shall be fulfilled and failure of anchorages made with these products would compromise the stability of the works, cause risk to human life and/or lead to considerable economic consequences. Safety in case of fire (Essential Requirement 2) is not covered in this ETA. The anchor is to be used only for anchorages subject to static or quasi-static loading in reinforced or unreinforced normal weight concrete of strength classes C 20/25 at least to C50/60 at most according to ENV 206: 2000-12. It may be anchored in non-cracked concrete only.

Galvanised steel anchor elements: The anchor may only be used in concrete subject to dry internal conditions.

Stainless steel elements: The anchor may be used in concrete subject to dry internal conditions and also in concrete subject to external atmospheric exposure (including industrial and marine environment), or exposure in permanently damp internal conditions, if no particular aggressive conditions exist. Such particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

- Mechanical properties according to EN ISO 898-1
- Quality affirmation of the mechanical properties with an inspection document according to EN 10204
- Marking the envisage embedment depth.

The two components of the SPIT injection mortar V-MIX + could be delivered in unmixed condition in mortar cartridges in a size of 150 ml, 300 ml and 380 ml in case of coaxial cartridges, 345 ml and 825 ml in case of side by side cartridges according to Annex 3.

2.2. Methods of verification

The assessment of fitness of the anchor for the intended use in relation to the requirements for mechanical resistance and stability and safety in use in the sense of the Essential Requirements 1 and 4 has been made in accordance with the « Guideline for European Technical Approval of Metal Anchors for use in Concrete », Part 1 « Anchors in general » and Part 5 « Bonded anchors », on the basis of Option 7.

In addition to the specific clauses relating to dangerous substances contained in this European Technical Approval, there may be other requirements applicable to the products falling within its scope (e.g. transposed European legislation and national laws, regulations and administrative provisions). In order to meet the provisions of the UE Construction Products Directive, these requirements need also to be complied with, when and where they apply.

3 Evaluation of Conformity and CE marking

3.1. Attestation of conformity system

The system of attestation of conformity 2 (i) (referred to as system 1) according to Council Directive 89/106/EEC Annex III laid down by the European Commission provides:

a) tasks for the manufacturer:

1. factory production control,
2. further testing of samples taken at the factory by the manufacturer in accordance with a prescribed test plan.

b) tasks for the approved body:

3. initial type-testing of the product,
4. initial inspection of factory and of factory production control,
5. continuous surveillance, assessment and approval of factory production control.

3.2. Responsibilities

3.2.1. Tasks of the manufacturer, factory production control

The manufacturer has a factory production control system in the plant and exercises permanent internal control of production. All the elements, requirements and provisions adopted by the manufacturer are documented in a systematic manner in the form of written policies and procedures. This production control system ensures that the product is in conformity with the European Technical Approval.

The manufacturer shall only use raw materials supplied with the relevant inspection documents as laid down in the prescribed test plan⁶. The incoming raw materials shall be subject to controls and tests by the manufacturer before acceptance. Check of incoming materials such as nuts, washers, threaded rods, resin, hardeners... shall include control of the inspection documents presented by suppliers (comparison with nominal values) by verifying dimension and determining material properties, e.g. tensile strength, surface finish.

The frequency of controls and tests conducted during production is laid down in the prescribed test plan taking account of the automated manufacturing process of the anchor.

The results of factory production control are recorded and evaluated. The records include at least the following information:

- designation of the product, basic material and components;
- type of control or testing;
- date of manufacture of the product and date of testing of the product or basic material and components;
- result of control and testing and, if appropriate, comparison with requirements;
- signature of person responsible for factory production control.

The records shall be presented to the inspection body during the continuous surveillance. On request, they shall be presented to the Centre Scientifique et Technique du Bâtiment.

Details of the extent, nature and frequency of testing and controls to be performed within the factory production control shall correspond to the prescribed test plan which is part of the technical documentation of this European Technical Approval.

3.2.2. Tasks of approved bodies

3.2.2.1. Initial type-testing of the product

For initial type-testing the results of the tests performed as part of the assessment for the European Technical Approval shall be used unless there are changes in the production line or plant. In such cases the necessary initial type-testing has to be agreed between the Centre Scientifique et Technique du Bâtiment and the approved bodies involved.

3.2.2.2. Initial inspection of factory and of factory production control

The approved body shall ascertain that, in accordance with the prescribed test plan, the factory and the factory production control are suitable to ensure continuous and orderly manufacturing of the anchor according to the specifications mentioned in 2.1. as well as to the Annexes to the European Technical Approval.

3.2.2.3. Continuous surveillance

The approved body shall visit the factory at least once a year for regular inspection. It has to be verified that the system of factory production control and the specified automated manufacturing process are maintained taking account of the prescribed test plan.

⁶

The prescribed test plan has been deposited at the Centre Scientifique et Technique du Bâtiment and is only made available to the approved bodies involved in the conformity attestation procedure.

Continuous surveillance and assessment of factory production control have to be performed according to the prescribed test plan.

The results of product certification and continuous surveillance shall be made available on demand by the certification body or inspection body, respectively, to the Centre Scientifique et Technique du Bâtiment. In cases where the provisions of the European Technical Approval and the prescribed test plan are no longer fulfilled the conformity certificate shall be withdrawn.

3.3. CE-Marking

The CE marking shall be affixed on each packaging of anchors. The symbol « CE » shall be accompanied by the following information:

- identification number of the certification body;
- name or identifying mark of the producer and manufacturing plant;
- the last two digits of the year in which the CE-marking was affixed;
- number of the EC certificate of conformity;
- number of the European Technical Approval;
- use category (ETAG 001-5 Option 7);
- size.

4 Assumptions under which the fitness of the product for the intended use was favourably assessed

4.1. Manufacturing

The anchor is manufactured in accordance with the provisions of the European Technical Approval using the automated manufacturing process as identified during inspection of the plant by the Centre Scientifique et Technique du Bâtiment and the approved body and laid down in the technical documentation.

4.2. Installation

4.2.1. Design of anchorages

The suitability of the anchor for the intended use is given under the following conditions:

The anchorages are designed in accordance with the EOTA Technical Report TR 029⁷ "Design of bonded anchors" under the responsibility of an engineer experienced in anchorages and concrete work. Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).

4.2.2. Installation of anchors

The fitness for use of the anchor can only be assumed if the anchor is installed as follows:

- anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on the site;
- use of the anchor only as supplied by the manufacturer without exchanging the components of an anchor;

⁷ The Technical Report TR 029 "Design of Bonded Anchors" is published in English on EOTA website: www.eota.eu.

- anchor installation in accordance with the manufacturer's specifications and drawings using the tools indicated in the technical documentation of this European Technical Approval;
- checks before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range;
- check of concrete being well compacted, e.g. without significant voids;
- keeping the effective anchorage depth;
- keeping of the edge distance and spacing to the specified values without minus tolerances;
- positioning of the drill holes without damaging the reinforcement;
- in case of aborted drill hole: the drill hole shall be filled with mortar;
- Cleaning of the hole: Standard cleaning
 - cleaning the hole of drilling dust : the hole shall be cleaned by at least four blowing operations with hand pump, by at least four manual brushing operations followed again by at least four blowing operations; before brushing cleaning the brush and checking whether the brush diameter according to Annex 5 Table 2 is sufficient;
- Cleaning of the hole: Premium cleaning
 - cleaning the hole of drilling dust : the hole shall be cleaned by at least two blowing operations with compressed air & an air pistol, by at least two mechanical brushing operations followed again by at two blowing operations; before brushing cleaning the brush and checking whether the brush diameter according to Annex 5 Table 2 is sufficient;
- anchor installation ensuring the specified embedment depth, that is the appropriate depth marking of the anchor not exceeding the concrete surface;
- mortar injection by using the equipment including the special mixing nozzle shown in Annex 3; discarding the first swings of mortar of each new cartridge until an homogeneous colour is achieved; taking from the manufacturer instruction the admissible processing time (open time) of a cartridge as a function of the ambient temperature of the concrete; filling the drill hole uniformly from the drill hole bottom, in order to avoid entrapment of air; removing the special mixing nozzle slowly bit by bit during pressing-out; filling the drill hole with a quantity of the injection mortar corresponding to $\frac{1}{2}$ of the drill hole; inserting immediately the anchor rod or threaded rod, slowly and with a slight twisting motion, removing excess of injection mortar around the rod; observing the curing time according to Annex 5 table 2 until the rod may be loaded; during curing of the injection mortar the temperature of the concrete must not fall below 0°C;
- application of the torque moment given in Annex 8 Tables 4 and 5 using a calibrated torque wrench.

–

4.2.3. Responsibility of the manufacturer

It is the manufacturer's responsibility to ensure that the information on the specific conditions according to 1 and 2 including Annexes referred to in 4.2.1. and 4.2.2. is given to those who are concerned. This information may be made by reproduction of the respective parts of the European Technical Approval. In addition all installation data shall be shown clearly on the package and/or on an enclosed instruction sheet, preferably using illustration(s).

The minimum data required are:

- drill bit diameter,
- thread diameter,
- maximum thickness of the fixture,
- minimum installation depth,
- required torque moment,
- admissible service temperature range,
- curing time of the bonding material depending on the installation temperature,
- information on the installation procedure, including cleaning of the hole, preferably by means of an illustration,
- reference to any special installation equipment needed,
- identification of the manufacturing batch.

All data shall be presented in a clear and explicit form.

5 Recommendations concerning packaging, transport and storage.

The mortar cartridges shall be protected against sun radiation and shall be stored according to the manufacturer's installation instructions in dry conditions at temperatures of at least 0°C to not more than +35°C.

Mortar cartridges with expired shelf life must no longer be used.

Brush for cleaning the drill hole

SPIT V-MIX +

Cleaning methods

**Annex 5
 of European Technical Approval
 ETA-05/0084**

Instruction For Use: Standard cleaning

Drill a hole to the correct diameter and depth using a rotary percussive machine.

Starting from the drill hole base blow out at least 4 times with the SPIT hand pump. For the hole diameter 10mm a reduction $\phi 6\text{mm}$ must be clamped on the air pump nozzle.

Using the specified brush, brush out 4 times mechanically

Starting from the drill hole base, blow out at least 4 times with the hand pump

Dispense the first part to waste until an even colour is achieved ($\approx 20\text{cm}$). Insert the nozzle to the far end of the hole, and inject the resin, withdrawing the nozzle as the hole fills. Fill the hole at 50%.

Immediately insert the fixing, slowly and with a slight twisting motion. Remove excess resin from around the mouth of the hole before it sets

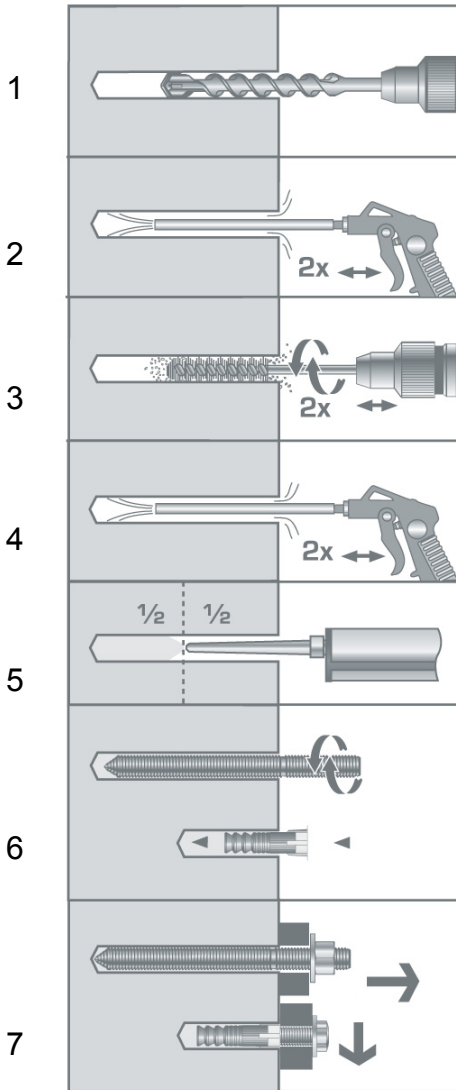

Leave the fixing undisturbed until the cure time has elapsed. Attach the fixture and tighten the nut at the required torque.

SPIT V-MIX +

Instruction For Use: Standard cleaning

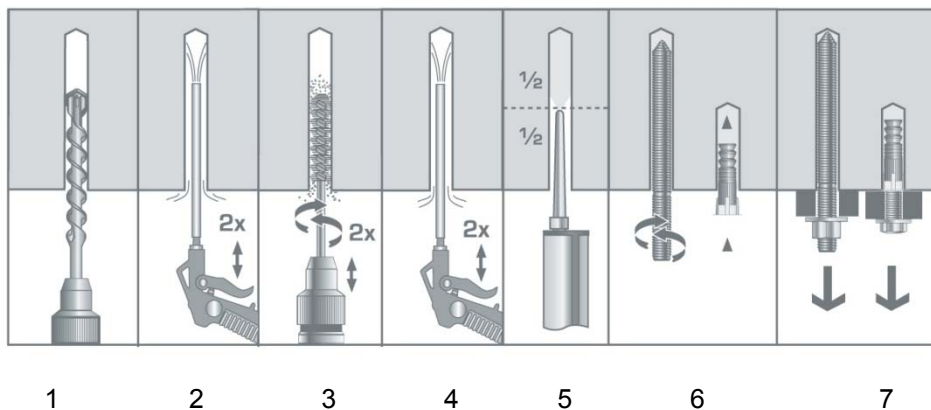

**Annex 6
of European Technical Approval
ETA-05/0084**

Horizontal installation or downward

1. Drill a hole to the correct diameter and depth using a rotary percussive machine.
2. Starting from the drill hole base blow out at least 2 times using oil free compressed air (mini 6 bar).
3. using the relevant brush fitted on a SPIT drilling machine, starting from the top of the hole, move downward to the bottom of the hole (duration 5s) then move upward to the top of the hole (duration 5s)
4. Starting from the drill hole base blow out at least 2 times using oil free compressed air.
5. Dispense the first part to waste until an even colour is achieved (\approx 20cm). Insert the nozzle to the far end of the hole, and inject the resin, withdrawing the nozzle as the hole fills. Fill the hole at 50%.
6. Immediately insert the fixing, slowly and with a slight twisting motion. Remove excess resin from around the mouth of the hole before it sets
7. Leave the fixing undisturbed until the cure time has elapsed. Attach the fixture and tighten the nut at the required torque.

		C40/50	1,26						
		C50/60	1,34						
Splitting failure ²⁾									
Edge distance $c_{cr,sp}$ [mm] for	$h / h_{ef} \geq 2,0$		1,0 h_{ef}						
	$2,0 > h / h_{ef} > 1,3$		4,6 h_{ef} - 1,8 h						
	$h / h_{ef} \leq 1,3$		2,26 h_{ef}						
Spacing	$s_{cr,sp}$	[mm]	2 $c_{cr,sp}$						
Partial safety factor $\gamma_{Mp} = \gamma_{Mc} = \gamma_{Msp}$	Category 1 Dry and wet concrete	Standard cleaning	1,8 ⁶⁾						
		Premium cleaning	1,5 ⁵⁾						
	Category 2 Dry and wet concrete or flooded holes	Standard cleaning	1,8 ⁶⁾						
		Premium cleaning	1,8 ⁶⁾	1,5 ⁵⁾					

¹⁾ In absence of national regulations

²⁾ Calculation of concrete and splitting, see chapter 4.2.1

³⁾ Explanations, see chapter 1.2

⁴⁾ h_{ef} . effective anchorage depth

⁵⁾ The partial safety factor $\gamma_2 = 1,0$ is included

⁶⁾ The partial safety factor $\gamma_2 = 1,2$ is included

Table 7: Characteristic displacements under axial tension loads [mm/(N/mm²)]

C 20/25 to C50/60 concrete		Threaded rods						
		M8	M10	M12	M16	M20	M24	M30
Temperature range I ³⁾ : 40°C / 24°C	δ_{N0} short term	0,02	0,03	0,03	0,04	0,05	0,06	0,08
	$\delta_{N\infty}$ long term	0,10	0,11	0,13	0,16	0,20	0,23	0,30
Temperature range II ³⁾ : 80°C / 50°C	δ_{N0} short term	0,07	0,08	0,09	0,12	0,14	0,17	0,22
	$\delta_{N\infty}$ long term	0,27	0,32	0,37	0,46	0,56	0,66	0,85

SPIT V-MIX +

Characteristic values under tension loads and displacements for threaded rods

**Annex 9
 of European Technical Approval
 ETA-05/0084**

Table 8: Characteristic values of resistance to shear loads of design method A

SPIT V-MIX + with threaded rod			M8	M10	M12	M16	M20	M24	M30	
Steel failure without lever arm										
Characteristic resistance with "S" anchor rod	$V_{Rk,s}$	[kN]	11	17	25	47	59	85	136	
Characteristic resistance rod grade 5.8	$V_{Rk,s}$	[kN]	9	15	21	39	61	88	140	
Characteristic resistance rod grade 8.8	$V_{Rk,s}$	[kN]	15	23	34	63	98	141	224	
Characteristic resistance rod grade 10.9	$V_{Rk,s}$	[kN]	18	29	42	78	122	176	280	
Characteristic resistance rod grade A4-70	$V_{Rk,s}$	[kN]	13	20	30	55	79	114	131	
Characteristic resistance rod grade HCR	$V_{Rk,s}$	[kN]	12	19	27	51	80	115	182	
Steel failure with lever arm
